ABOUT ME

I am a full-stack developer who is more of a backend developer and familiar with both Node.js and Python. I develop scalable APIs, databases and cloud architecture which runs an efficient, fast web application. I like to create the systems which answer actual business issues- clean inside, smooth outside and transform complicated concepts into effective, overall digital results.

EXPERIENCE

Cloud Security Research Intern

Vidyalankar Institute of Technology

December 2025 – February 2026

Mumbai, Maharashtra, India (Hybrid)

- Reverse-engineered vulnerable AWS infra (public RDS/S3, plaintext creds); Terraform-hardened to private subnets, ALB TLS, KMS encryption, Secrets Manager - 100% attack sim mitigation.
- Built prod-grade Node.js+PostgreSQL AWS stack: custom IAM (prefix-specific S3/KMS), EB/RDS isolation, GuardDuty+CloudTrail logging, 5min reproducible deployments.
- Simulated SQLi/priv-esc attacks; validated via tf plan, CW alarms, Config rules—achieving compliant, drift-proof infrastructure.

Full Stack Developer Intern

Eas Legal Services

September 2025 – December 2025

Mumbai, Maharashtra, India (Remote)

- Designed a robust RESTful API with Express and Prisma ORM, handling complex data relationships for user authentication, document management, and organization workflows.
- Developed production-grade code and a user-friendly interface to enhance user experience.
- Implemented a robust Advanced Role-Based Access Control (RBAC) multi-role authentication system utilizing JWT for secure, scalable user access management.
- Deployed the application on AWS using nginx, EC2 instances, and S3 buckets for optimized performance and scalability.

PROJECTS

Silent Parcel | *NextJS, Shadcn, Tailwind CSS, AppWrite, GitHub Actions, Pipelines* |

Live Link | Repo

- Engineered end-to-end encrypted file storage using Appwrite, ensuring secure data hosting and preventing server-side access to sensitive content.
- Designed a collaborative file management workflow with client-side decryption and editing (add/remove/update within zip archives), maintaining seamless updates and encryption before upload.
- Implemented scalable, secure live-coding and ephemeral chat rooms with full end-to-end encryption.

Graphex | *TypeScript, tRPC, Prisma, Resend, Github OAuth, Shadcn, DodoPayments, Push Notifications* |

Live Link

- Integrates with GitHub via secure OAuth, enabling seamless connection of your account using GraphQL API without sharing credentials
- Implemented an automated notification system with email (Resend API) and browser push notifications (Web Push API/VAPID) with timezone-aware delivery management.
- Architected a scalable backend with tRPC API routes, server-side rendering, scheduled cron jobs for daily reminders, and a subscription-based billing system with free trial management, deployed to production

PeakMark | *React Query, Turbo Repo, TypeScript* | **Live Link | Repo**

- Built a web application for creating and exporting badges for Project Showcase and READMEs using Next.js 16, tRPC, and TypeScript. Features include a real-time preview.
- Created a high-performance monorepo with Turborepo, incorporating an isolated API layer using tRPC for type-safe build and shared packages.
- Implemented query-based badge generation for shareable URLs and one-click exports, allowing segment-level customization.

EDUCATION

Vidyalankar Institute Of Technology

Mumbai, India

B.Tech in Information Technology (GPA: 9.53/10)

2023 – Present

R.K. Talreja Jr College of Science, Commerce and Arts

Kalyan, Mumbai, India

Grade XII (First Class)

2021 – 2023

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, HTML

Frameworks/Libraries: Django, React, Next.js, Tailwind CSS, Hono, Express.js, React Query

Developer Tools: Git, GitHub Actions, Docker, Terraform, nginx, Postman, VS Code

Cloud Computing: AWS, GCP, Firebase, Appwrite

Databases/ORMs: MongoDB, Prisma, Drizzle
